

JIGSAW

Upholding technology as a force for *good*.

Jigsaw is a unit within Google that explores threats to open societies, and builds technology that inspires scalable solutions.

IMPACT STORIES

INTRA & Venezuela

LOCATION Venezuela **FOCUS** Censorship **YEAR** 2018

DNS manipulation is one of the most common cyberattack tools used to block access to websites and communication tools. As we were developing Intro, an app that makes it easy to bypass DNS manipulation, we worked closely with Venezuelans to regularly test the tool and give us technical and design feedback. Intro is now used by people in dozens of countries around the world who need a way to access news sites, communication tools and platforms.
